

Proteins & Vitamins

Being an important biomolecules, we at **SRL** offer extensive range of high purity Proteins & Vitamins to meet the wide Research & Industrial application needs.

Proteins are macromolecules, consisting of one or more long chains of amino acid residues linked by peptide bonds. They have found applications in different fields including food industry, enzymes, pharmaceutical products, protein folding applications, targeted drugs, nanomedicine, growth factors, antigen-antibody, protein crystallization and many more.

Among our range of Proteins, the exclusive range that we offer are recombinant proteins which are used as defined supplements to meet the increasing needs in biopharmaceutical, vaccine and stem cell manufacturing. Our Recombinant Proteins are Animal Component Free (ACF), thereby avoiding transfer of infectious agents in cell line production.

Vitamins are a group of physiologically important organic compounds that are essential for humans and animals. Based on solubility vitamins are classified as either fat-soluble (lipid soluble) or water-soluble. Vitamins A, D, E & K are fat-soluble Vitamin C and B is water soluble.

Vitamins and related compounds are widely used as food or animal feed additives, medical or therapeutic agents, health aids, technical aids, in pharmaceutical & cosmetic industries. Our Exiplus range of selected vitamins meets the compendial specification of Pharmacopeia.
