### Other Information

Description

2X FSP Taq Mix is a premixed, ready-to-use solution containing FSP Taq DNA Polymerase, dNTP, Mg<sup>2+</sup> and Reaction Buffer at optimal concentrations for efficient amplification of DNA templates by PCR. To prepare the final PCR, only primers and template DNA are added. This pre-mixed formulation saves time and reduces contamination due to the fewer pipetting steps required for PCR set up.

The mix retains all features of FSP Taq DNA Polymerase - possesses high amplification efficiency and fast elongation. Can be used in various kinds of PCR. It has an elongation rate 2x higher than regular Taq DNA polymerase, and can shorten the amplification time by half. It has 5' to 3' polymerase activity but lacks of 3' to 5' exonuclease activity, which results in a 3'-dA overhangs PCR product.
