## FluroBronze PCR Ladder

Part E

### Specifications

Appearance (Form)	Liquid
Appearance (Colour)	Blue
A260/A280	1.7~1.9
Concentration	~100ng/μl
Stability	No obvious degradation was seen after incubation at 37°C for 1 week. Well-defined bands are formed during agarose gel electrophoresis

### Other Information

Description

This range of DNA Ladders are specially prepared as ready-to-load fluorescent ladders. The flurobronze PCR ladder contains in addition to the tracking dye, a non-carcinogenic nucleic acid stain. The ladder should be loaded onto an agarose gel (of appropriate concentration) containing no fluorescent dye. The stain contained in the ladder replaces ethidium bromide, thus eliminating its addition to the gel. This PCR Ladder has been designed to cover the most common range encountered in PCR amplifications. The range is represented by aesthetically pleasing ladder of five bands (50, 150, 300, 500 and 800 bp) that separate uniformly.

- FluroBronze PCR Ladder - 50 mcg
- FluroBronze Stain - 250 mcl

Includes

### General Information

Storage	-20 °C (Blue/Dry Ice)
Shelf Life	24 Months
IMDG Identification	Not Regulated for Transport (Non-Haz)
HSN Code	
50 mcg	38229090 (GST 12%)

### Available Packages
